PICKLEBALL ECO CUSHION COURT

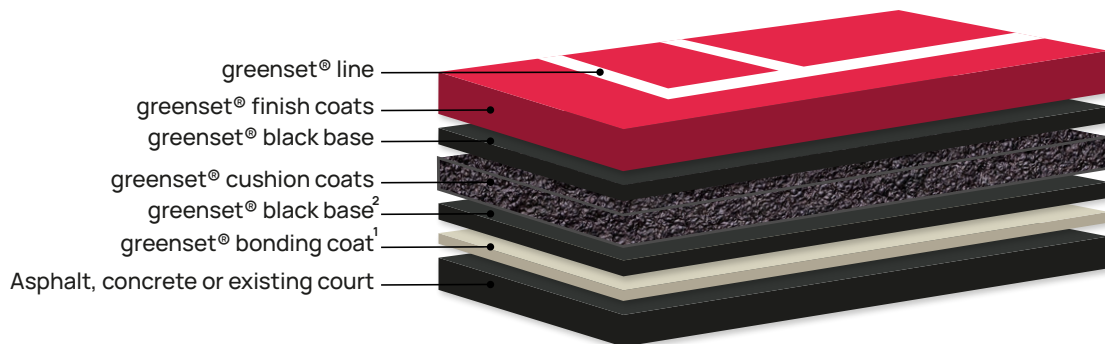

1 Only needed for concrete base or resurfacing

2 Only needed for new asphalt

The Pickleball Eco Cushion Court suits all players and styles, combining speed and shock absorption with sustainable cork components for a unique experience that enhances performance while protecting knee joints.

PICKLEBALL CUSHION COURT

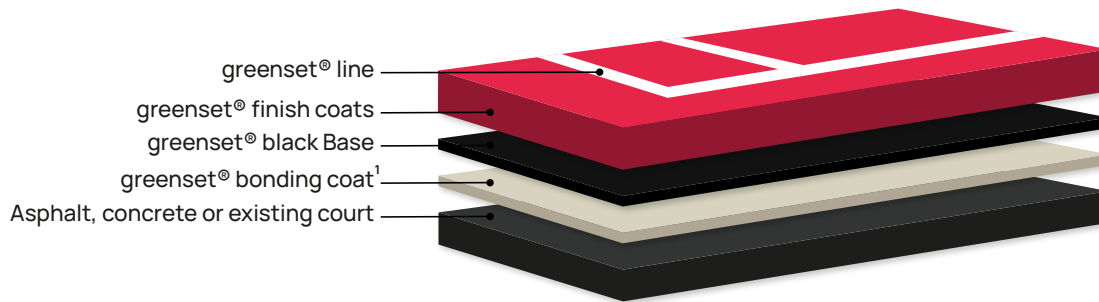

1 Only needed for concrete base or resurfacing

2 Only needed for new asphalt

The Pickleball Cushion Court is suitable for all kinds of players and game styles. Provides a high shock absorption and care for knee joints thanks to its layer of liquid rubber. It is the most used surface in elite private clubs and facilities. Play like a pro!

PICKLEBALL TOUR COURT

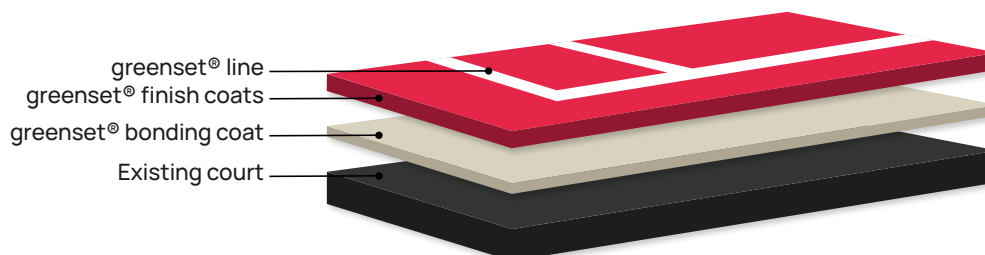

1 Only needed for concrete base or resurfacing

The Pickleball Tour Court has helped young players worldwide to fulfill their dreams for over 50 years. Our best-selling surface is mostly used in academies, training centers, and private facilities.

The perfect court for all skill levels.

PICKLEBALL CLUB COURT

The Pickleball Club Court is our version of the Tour court for reduced budgets. Mainly used for resurfacing of existing courts, this is our entry level court to experience greatness.

Multiple options that adapt to your needs.

GreenSet® pickleball surface is comprised of the highest quality acrylic components, enabling consistent delivery of a top quality, non-slip, wear-resistant acrylic option suitable for creating long lasting pickleball surfaces for players of all abilities.

FUNDAMENTAL BENEFITS

- Non Slip
- Wear resistant
- Durable
- Suitable for indoor and outdoor usage
- Apply over new asphalt, concrete, wooden floors, or existing sport surfaces requiring renewal.
- Exceptional quality
- Extensive variety of colours, custom colours available.

In April 2022, four GreenSet® pickleball courts were installed on an asphalt base. One year later a Friction Test was conducted to assess the slip resistance of the current playing surface.

Adequate in all seasons

Long-lasting

Low maintenance

The measure of slip resistance, or friction is the capability of the surface to resist slippage and provide adequate friction, allowing players to safely change direction during the game.

The test determined that the surface installed exceeds the requirement of >75BPN, the friction test achieved a reading between 75-85 BPN.
